

This Web App is created using Reactjs. Different components are rendered depending upon the operations the user wants to perform. It uses hooks for state-management. I have also used Bootstrap for designing the components used in this app.

Below are some screenshots for the operations:

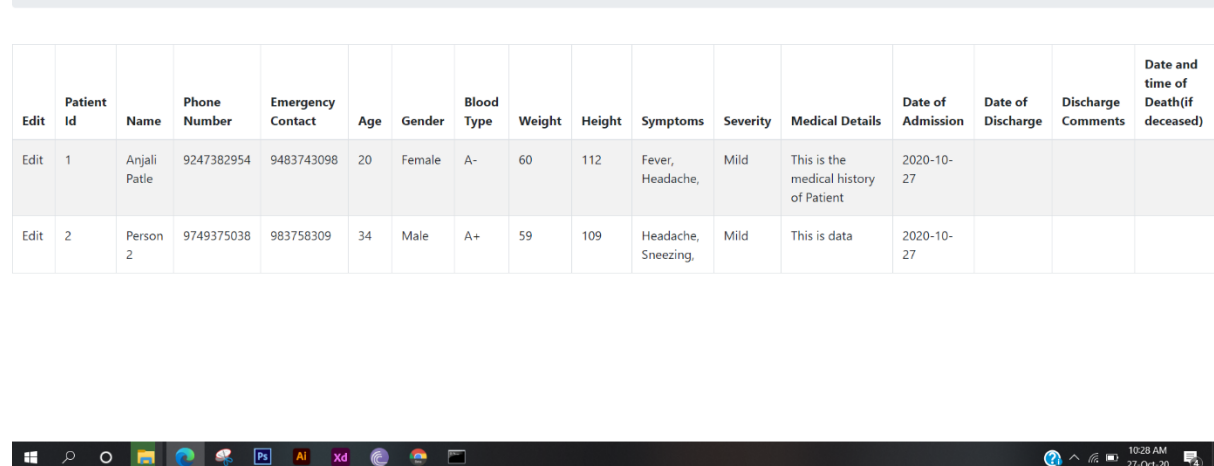

The screenshot shows a web browser window with the URL localhost:3000. The page has a header "Welcome to Hospital Database!" and a sub-header "Choose the operation you would like to perform." Below this are four buttons: "Add Patient", "View/Update Patient Details", "Search Patient", and "View other database Details". The "View/Update Patient Details" button is selected, leading to a form for "Patient Id: 1". The form contains the following fields:

- Full Name: Anjali Patie
- Phone Number: 9247382954
- Emergency Contact: 9483743098
- Age: 20
- Select Gender: Female
- Select Blood Type: A-
- Weight (in Kg):

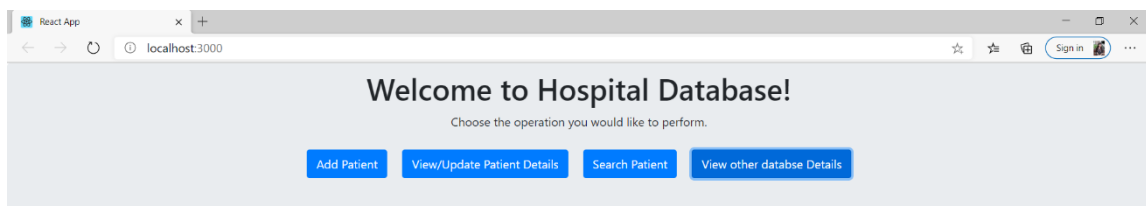

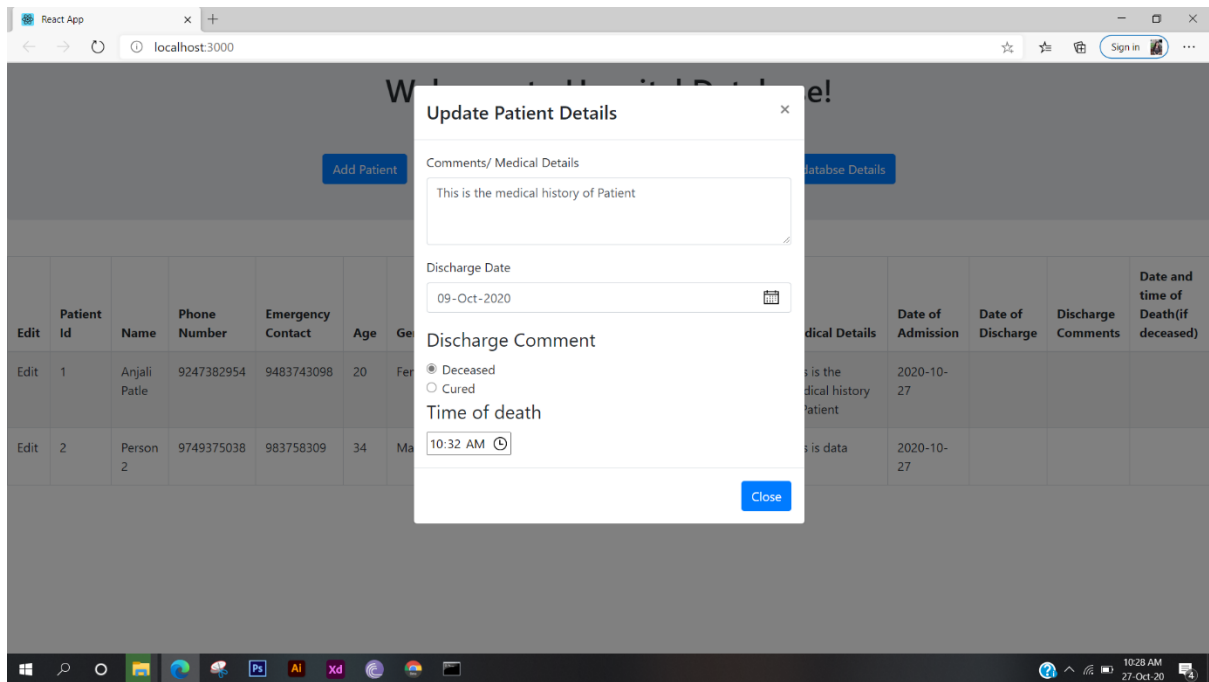

The screenshot shows the same web browser window with the "Welcome to Hospital Database!" header. The "View/Update Patient Details" button is selected, leading to a table displaying a list of patients.

Edit	Patient Id	Name	Phone Number	Emergency Contact	Age	Gender	Blood Type	Weight	Height	Symptoms	Severity	Medical Details	Date of Admission	Date of Discharge	Discharge Comments	Date and time of Death(if deceased)
Edit	1	Anjali Patie	9247382954	9483743098	20	Female	A-	60	112	Fever, Headache,	Mild	This is the medical history of Patient	2020-10-27			
Edit	2	Person 2	9749375038	983758309	34	Male	A+	59	109	Headache, Sneezing,	Mild	This is data	2020-10-27
